WordStar[®]
MailMerge[™]
SpellStar[™]
DataStar[™]
CalcStar[™]
SuperSort[™]
WordMaster[®]

Presenting the MicroPro family of business software solutions.

The seven software products described in this catalog can make a big difference in the productivity of your business—in getting a lot more work done with a lot less time and effort. MicroPro software products are remarkably powerful and versatile—and even more when you combine them.

For example: With **DataStar** you could maintain a mailing list. With **SuperSort** you could select certain addresses from the list. Then with **WordStar** you could draft a letter, and with the **SpellStar** option make it letter-perfect. Then you could insert part of a **CalcStar**-prepared ledger sheet into the letter. Finally, with the **MailMerge** option, you could print the letter, personalized for each name on your list.

When you buy one MicroPro product, it's just the beginning of the problem-solving power we can put at your command.

In this catalog we've kept the product descriptions brief. Visit a MicroPro dealer for detailed product literature and demonstrations of each program.

SOFTWARE
THAT MEANS BUSINESS[™]

MicroPro
INTERNATIONAL CORPORATION

WordStar®

WordStar is the finest, most versatile word processing program on the market — “the de facto standard for microcomputers,” according to *Microcomputing* magazine. And now we’ve added new features and new user aids to make it even more versatile and easier for beginners to learn.

What makes WordStar the leading word processing program?

What you see is what you get. With WordStar software, the screen shows you exactly what will get printed — including all format variations like page breaks, justification, and hyphenation. As soon as you type a change, it’s onscreen.

User friendly. WordStar’s manual has been completely rewritten to make it easier than ever to use. Meanwhile, our menus give you so much help, most of the time you can leave the manual sitting on the shelf. And now three additional user aids are available: a Training Guide that takes beginners through the basics step by step; a Reference Card to quickly remind you of WordStar commands; and a set of adhesive keytop labels that show the WordStar functions of your keyboard.

WordStar has more talent than you may ever need. Its flexibility is simply awesome. From text typing, to tables, to the most complex word processing you can imagine — WordStar lets you sail through it all with ease and efficiency.

Newest WordStar features include all new, easier-to-understand help menus; Horizontal Scrolling, which makes it easier to create extra-wide documents; and Column Move, which lets you move columns in tables from one place to another, and delete and copy columns.

Suggested USA retail prices: CP/M version, **\$495**; Apple version, **\$375**.

MailMerge™

WordStar option.

MailMerge is a powerful multi-purpose file merging program, used with WordStar. One of MailMerge’s most popular uses is producing customized form letters — at a fraction of the time and expense of individually typed letters.

With MailMerge software you can combine a WordStar file containing a form letter with a file containing a list of names and addresses. You can even insert special words and phrases — unique to each addressee — into the body of the letter. Other MailMerge uses include creating invoices, printing mailing labels, and producing “boilerplate” legal documents out of many different standard paragraphs.

Suggested USA retail prices: CP/M version, **\$150**; Apple version, **\$125**.

SpellStar™

WordStar option.

SpellStar is a spelling checker program that works with WordStar to find spelling and typing errors in your word processing, saving you countless hours of proofreading. SpellStar “proofreads” your document at thousands of words per minute, comparing what you’ve written with its 20,000-word dictionary-on-a-disk.

Since SpellStar software operates within the WordStar program, you get to see every misspelling and typo in context before taking action. SpellStar flags each word with a flashing cursor, giving you three choices: Change the word. Leave it as is. Or leave it and add it to the dictionary — and it won’t get flagged again. You can put the word in the main dictionary, or just as easily, create your own supplemental dictionaries for such things as specialized terms or client names. SpellStar’s integration with WordStar means you’re never more than one keystroke from full word processing.

Suggested USA retail prices: CP/M version, **\$250**; Apple version, **\$195**.

DataStar™

DataStar is a powerful data-handling program that allows you to enter, retrieve, and update data with incredible speed and flexibility.

DataStar software doesn’t lock you into set forms. Using FormGen, a form generation program that’s part of DataStar, you can design your own forms to match your exact needs. The program includes sample forms to guide you.

As part of the MicroPro family, DataStar teams up with MicroPro’s WordStar, MailMerge, and SuperSort programs. And you can use

DataStar as the data entry portion for many inventory, accounting, and other business applications — without expensive modifications to existing software.

DataStar provides the power and versatility usually found only in mainframe and mini-computer systems — with several ways of safeguarding accurate data entry, tremendous flexibility in searching for records, and detailed onscreen help messages.

Suggested USA retail prices: CP/M version, **\$350**; Apple version, **\$295**.

SuperSort™

SuperSort combines speed and remarkable flexibility in sorting, merging, and selecting information from data files. With SuperSort software you can sort and merge up to 32 files into a single file, in most cases at the rate of 560 records per minute or better — which is up to 10 times faster than a BASIC language sort program. And you can integrate new records into a master file in one simple and efficient operation.

SuperSort accepts just about any kind of record you can imagine. The data can be justified, and can include floating decimals, exponential notation, or upper- and lower-case letters; data can even be in several standard formats — binary, bcd, ASCII, etc. — you don't waste time translating your records for the computer. And you can specify up to 32 selection criteria.

SuperSort is simple to use. Sort and merge instructions are easy to enter. Errors are pointed out on the screen and easily corrected. And if you give SuperSort instructions it can't follow, you get a help message in plain English.

Suggested USA retail prices: CP/M versions — SuperSort I (callable as subroutine), **\$250**; SuperSort II, **\$225**; Apple versions — SuperSort I, **\$200**, SuperSort II, **\$150**.

WordMaster®

WordMaster is a comprehensive video text editor used mainly by programmers. WordMaster permits onscreen insertion and deletion, block moves, and numerous cursor movement commands (such as tab, page, and scroll).

You can make changes easily and see results immediately.

WordMaster's Scratchpad Memory lets you temporarily store text for later insertion any number of times into the file you're editing. You can also load the scratchpad with a complex string of commands for later execution.

WordMaster also features extensive macro command capability for file manipulation.

Suggested USA retail prices: CP/M version, **\$150**.

CalcStar™

CalcStar is an electronic spread sheet and financial modeling program — a sophisticated, yet easy to use, calculating and business planning tool.

CalcStar calculates solutions to complex numerical problems in business and finance. It helps you make budget plans and sales forecasts with greater speed and accuracy. And it projects figures into the future to answer the "what if" questions you face in business. And CalcStar has a unique MicroPro advantage: It joins with WordStar to combine spread-sheet and word-processing capabilities in several powerful ways.

CalcStar software eliminates the need to use ledger paper ever again. It turns your video screen into a "window" on a giant electronic ledger sheet, with up to 600 entries arranged the way you want. Then, by inserting formulas into CalcStar, you create financial models that simulate the future numerically — and predict the potential outcomes of your business decisions.

When you combine CalcStar with WordStar, you'll gain printing options like boldface and underlining to help you dress up financial documents. You'll also gain the ability to insert sections of CalcStar spread sheets into your word processing — extremely handy for such things as budget reports.

CalcStar is simple to use. It has WordStar-like keystrokes, onscreen help messages, and a user's guide that leads you through the basics.

Suggested USA retail price: CP/M version, **\$295**; Apple version, **\$195**.

The company behind the software.

MicroPro International Corporation is a leading developer of business software for microcomputers. Founded in 1978, MicroPro has enjoyed phenomenal success by producing software products that are innovative, simple to use, remarkably versatile, and capable of working together to multiply their problem-solving power. MicroPro software is sold by more than 1,000 dealers in the United States and 27 other countries.

MicroPro's word processing program, WordStar, introduced in 1979, is the company's most successful product so far. WordStar now ranks as the best-selling word processing program for microcomputers, in number of units sold in retail stores in the USA.*

MicroPro is committed to developing an expanding family of powerful and easy-to-use software that meets the complete information-processing needs of business.

*Source: *Computer Merchandising*, November 1981.

MicroPro software products will operate on Z-80, 8080/8085 computers running under CP/M® and most derivative operating systems. Compatible models include:

Altos, Apple II*, Archives, Cromemco, Digital Microsystems, Dynabyte, ECS Microsystems, Exidy, Feltron 5080, GNAT, Heath, IMSAI, Industrial MicroSystems, Intelligent Systems, Intel MDS, Kemitron, Kontron, MicroDaSys Millie, Micromation, NorthStar, Ohio Scientific, ONYX, PBM-1000, RAIR, R2E, S.D. Systems, SuperBrain, TEI, TRS-80 (Models I, II, and III), Vector Graphic, Xerox 820, Zenith, Zilog, and others.

MicroPro provides most programs in the following formats:

Apple/CP/M (specify 16 or 13 sector);* Dynabyte 5¼" single density; Heath/Zenith H/Z-89 (specify ORG 0 for Magnolia/Zenith CP/M or ORG 4300 for Lifeboat CP/M); IBM single density 3740 format; Micropolis 5¼" single density; NorthStar (specify single or double density); SuperBrain (specify DOS 1.0/2.0 or DOS 3.0); TRS-80 Model I; Vector Graphic Tandon 5¼"; Xerox 820 5¼" single density.

Formats to come:

Cromemco 5¼" single density; NEC 5¼"; Ohio Scientific 8" single density; Osborne 1 5¼" single density; Panasonic 5¼"; TRS-80 Model III.

*Apple versions of MicroPro programs require a Z-80® - CP/M® adaptation device and 80-column video board.

MicroPro products currently can *not* run on the following systems: PET, SWTP Co., Apple I and III.

Z-80 is a registered trademark of Zilog, Inc.

CP/M is a trademark of Digital Research, Inc.

Prices and specifications are subject to change without notice. Prices apply in USA only.

MicroPro products are sold and supported exclusively by authorized MicroPro dealers. For the name of your local dealer, call or write:
